📍 Exploring Another Biosecurity Research Environment 🌐

Returned to [SEGES Innovation](#) after a fascinating two-week stay at [Universitat Autònoma de Barcelona](#). Many thanks to [Alberto Allepuz](#) and the epidemiological research team for your kindness and for allowing me to share my work, as well as giving me valuable insight into your research on biosecurity in livestock production. It was inspiring to see your approach to biosecurity, from quantification through to implementation.

I look forward to following [Natalia Ciria Artiga](#) and [Mafalda Mil-Homens'](#) work on the inclusion of a Salmonella Dublin module in FarmRISK, Georgina Molero Murá's research on biosecurity in non-intensive farming systems, and [Teresa Imperial Esteban's](#) research linking epidemiology and sociology to improve biosecurity.

Fingers crossed for no further ASF outbreaks in Spain, and that access to trails for my next run in Catalunya will be possible.

[#Biosecurity](#) [#Epidemiology](#)
