SEGES
INNOVATION

VelkoTek = WelCoTech (Welfare Cow Technology)

Developing welfare indicators based on data from milking parlours

Cattle data base + activity

Milk volume

Algorithms measuring deviations:

Disease detection
Welfare indicator

Developing indicators based on vision technology

Annotation of images + AI algorithms: Movements, behaviour, tracking

Disease detection
Welfare indicator

Developments of prototypes

Prototype based on milk data

Common prototype

- 5 installations (barns)
- 2-3 cameras per 100 cows
- 2-D normal light sensitivity
- Fish eye lens
- Cameras covers lying area, feeding table and alleys

Installation nr. 1
Monteret juli 2022

VelKoTek - AP2

Camera 01

(a) Camera 1: Real footage

(c) Camera 2: Real footage

(e) Camera 3: Real footage

Patrick Bøgelund Dalage. 2023. Object Detection and Localization of Milking Cows, Projekt opgave SDU

(a) Camera 1 at 60 %

(b) Camera 2 at 60 %

(c) Camera 1 at 70 %

(d) Camera 2 at 70 %

(e) Camera 1 at 80 %

(f) Camera 2 at 80 %

Figure 13: Green indicates that the model has correctly predicted the cow. Red indicates when the model is either predicting incorrectly or missing the object.

Patrick Bøgelund Dalage. 2023. Object Detection and Localization of Milking Cows, Projekt opgave SDU

Model development using Artificial Intelligence

Defining certain features from where welfare/disease indicators can be derived

Ground truth – recognized by AI

- a. Stalls
- b. Alleys
- c. Feeding table

Cow detection – recognized by AI

- d. Cows position
 - e. Lying/standing
- } Detection models

f. Cows position over time (24 h) – MultiObjectTracking models

Model development for measurements

Derived measurements	a. Stalls	b. Alleys	c. Feeding table	d. Cows position	e. Lying/standing	f. position over time
Cow in stall +/-	X			X		
Lying/standing bout duration	X			X	X	
Time at feeding table per cow			X	X		X
Time in alleys per cow		X		X		X
Displacements	X			X	X	X
# cows down in stalls over time				X	X	
Cows are at feeding table or in alleys		X	X	X		
# cows at feeding table			X	X		

Models for disease detection and welfare indicators

- Use the measurements to
 - Develop indicators to detect initial sickness behaviour at cow level
 - Combined with milk deviations
 - Golden standart: Treatment recordings
 - Welfare indicators at group level
 - # cows having lay down/getting up difficulties
 - # cows with 'long' lying bouts
 - Golden standart: 'traditionel' welfare indicators – Welfare index at herd level

Questions

- Could there be other measurements valuable in
 - Disease detection?
 - Welfare indicators at group level?
- Could there be other welfare indicators at group level?

Thanks
