## SS Fertility results

Here is the first results of fertility singlestep indexes for all breeds. Only results for the combined index "fertility" is shown, but results are also generated and studied for sub-trait.

Analysis is done for JER, RDC and HOL

I have run full and reduced runs for traditional (EBV) and for singlestep (SS)  
Reduced dataset is similar to full besides that offspring of bulls born after 2015 is removed.

Reliabilities for singlestep fertility still needs to be estimated. This will be added later.
