SEGES
INNOVATION

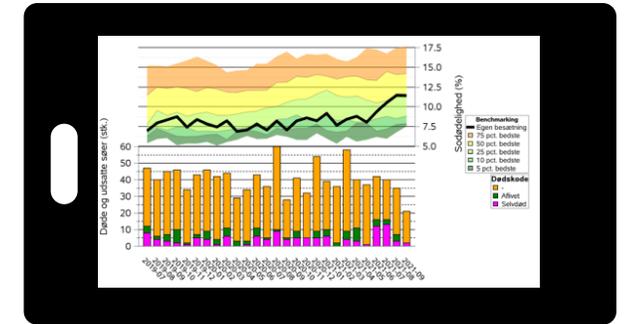

Longevity of sows is a common challenge

- It is hard work to take out dead sows – especially from farrowing crates
 - Most people don't like to kill a sow
 - Everybody wants to work with healthy sows
 - Dead sows cost money – Slaughtered sows pays 12.40 pr kg
 - Motivation – together we can increase the survival rate of the sows
-
- A good basis for decision-making is important

SEGES *InSight*

Decisions require insight to implement the right things with the greatest effect

- Good daily records are transformed into knowledge and used in the production
- The reports provide an overview
- Targeted reports are ready every month at our Vets visit – then you can follow up on and make new decisions!

SEGES *InSight* - Records

- The best overview is obtained with precise records- date and reason
- We use your registrations directly from the management software
 - No additional registrations
- You decide the level of details and see the results in the reports
- SEGES InSight has recommendations for diagnoses – www.segesinsight.dk

Get started with few and secure records

If you want an English version, please contact (afmj@seges.dk)

Slaugt	Dead	Killed	Code/reason	Remarks
			Feed and feeding	Shoulder wounds, Skinny, Prolaps etc.
			Sudden death	Sudden/unexpected for a well producing sow
			Legs	Wounds/abscesses on the foot/hooves and damage to the joints, legs and hooves
			Farrowing	Bad milking, farrowing problems, retained fetuses, etc.mv.

Ok for most of you

– include slaughter and dead/killed sows

If you want an English version, please contact (afmj@seges.dk)

Slaugt	Dead	Killed	Code / reason	Remarks
			Udder problems	Udder fungi, blind teats, milking poorly
			Skinny	Not ok in the group, cowed, does not eat, assaulted
			Shoulder wounds	
			Reproduction	Lack of heat, not pregnant, low litter size
			Sudden death	Suden/unexpected for a well producing sow
			Farrowing	Damage caused by the farrowing, retained fetuses ect.
			Prolaps	
			Kodesår / klovbylder	Ulcer/abscess on foot/hoof, torn hoof/claws
			Legs	Legs in general, including joint injuries, arthritis, injuries coursed by fighting, etc
			Adjustment of the batch	Deliberate slaughters due to the size of the weekly batch
			Age	
			Ect.	

Precise diagnoses improve the focus on sow survival

1. Employees

- They are the ones who are in the stable corridor and must be able to recognize the diagnoses in everyday life

2. Create an overview

- Diagnoses must be uniform without overlap with other diagnoses, **talk to your Vet about the choice of diagnoses**

3. Set up your management system correctly

- Adjust the systems so that only sow diagnoses can be selected for sows and correct death codes for correct disease codes

4. Contact your management provider regarding setting up diagnoses:

- Cloudfarms: support@cloudfarms.com
- AgroVision: support-dk@agrovision.com

SEGES InSight – Survival of the sow

- Development of sow survival over a period
- Clarification of the most important challenges
- Follow-up on decisions

**Use SEGES *InSight*
...together**
